A- Interim Development Impact Fee

1. Introduction

This study establishes the Interim Development Impact Fee for the City of Carson. The Development Impact Fee is a tool used for shifting part of the cost of providing new public infrastructure to the developers in order to mitigate various intersections in the City impacted by new development. This study calculates the impact fees associated with new developments within the City of Carson which impacts twenty-two (22) intersections. The allocation of fees will be based on the projected amount of traffic generated by the new developments to be added to the intersections and the estimated cost to mitigate the added traffic via proposed improvements. These fees are implemented to help reduce the economic burden on the City due to the growth caused by new development. This report will also analyze the noise level impact certain projects will have on truck routes in the City that border residential neighborhoods. Although this is a technical development fee analysis, every effort has been made to write the report clearly and concisely.

2. Mitigation Fee Act

The California Mitigation Fee Act (Assembly Bill 1600) requires local governments to document the following when adopting an impact fee:

- Identify the purpose of the fee;
- Identify the use of revenues;
- Determine a reasonable relationship between the use of the fee and the type of the development paying the fee;
- Determine a reasonable relationship between the need for the fee and the type of development paying the fee; and
- Determine a reasonable relationship between the amount of the fee and the cost of the facility attributable to development paying the fee.

In summary, a fee cannot be more than the cost of the public facility needed to accommodate the new development paying the fee, and the fee revenues can only be used for their intended purpose.

3. Location of New Developments

As shown in Figure 1, a total of 23 projects are expected to be implemented in the City of Carson. These projects are listed in Table 1.

4. Study Area

As illustrated in Figure 2, a total of 22 intersections were identified for the Interim Development Impact study. These intersections are listed below:

1. Figueroa Street at I-405 Southbound On-Ramp
2. Figueroa Street at I-405 Northbound On-Ramp
3. Main Street at I-405 Southbound On-Ramp
4. Main Street at I-405 Northbound Off-Ramp
5. Figueroa Street at Del Amo Boulevard
6. Main Street at Del Amo Boulevard
7. Stamps Drive at Del Amo Boulevard
8. Avalon Boulevard at Del Amo Boulevard
9. Figueroa Street at I-110 Northbound Ramps
10. Main Street at Street Lenardo Drive
11. Figueroa Street at Torrance Boulevard
12. Main Street at Torrance Boulevard
13. Lenardo Drive at I-405 Southbound Ramps
14. Avalon Boulevard at I-405 Southbound Ramps
15. Avalon Boulevard at I-405 Northbound Ramps
16. Main Street at 213th Street
17. Avalon Boulevard at 213th Street
18. Figueroa Street at Carson Street
19. Main Street at Carson Street
20. Avalon Boulevard at Carson Street
21. I-405 Southbound Ramps at Carson Street
22. I-405 Northbound Ramps at Carson Street

5. Existing Traffic Volumes

Existing peak hour traffic volumes provided by the City of Carson are based upon morning and evening peak period intersection turning movement counts obtained in November 2016 during typical weekday conditions. The morning peak period was collected between 7:00 AM and 10:00 AM and the evening peak period was collected between 4:00 PM and 7:00 PM. The actual peak hour within the peak period is the four consecutive 15 minute periods with the highest total volume when all movements are added together. Thus, the weekday evening peak hour at one intersection may be 4:45 PM to 5:45 PM if those four consecutive 15 minute periods have the highest combined volume. Intersection turning movement count worksheets are provided in Appendix A.

Figure 3 and Figure 4 show the existing morning and evening peak hour intersection turning movement volumes, respectively.

6. Trip Generation

Table 2 shows the trip generation based upon regression/linear equations for each project based on the land use obtained from the Institute of Transportation Engineers (ITE), Trip Generation Manual, 10th Edition, 2017.

In accordance with the Institute of Transportation Engineers recommendations, the numbers of trips forecast to be generated by the proposed land use are determined by solving for trips (T) in the trip generation equation given the land use quantity (X). On average, truck trips account for approximately 13-percent of weekday trips generated by industrial park land uses. To provide a conservative analysis, the project trip generation shown in Table 2 assumes trucks will comprise 15-percent of the site-generated trips. The site-generated truck trips have been converted to passenger car equivalent trips based on a factor of 2.0.

As shown in Table 2, the proposed projects are estimated to generate approximately 71,026 daily trips in passenger car equivalents, of which, 5,574 trips would occur during the morning peak hour and 8,814 trips would occur during the afternoon peak hour. The daily trip estimates are used in calculating fees for the affected intersections in the City of Carson. Table 3 represents the new development new trip share in the city at buildout.

7. Trip Distribution

Figure 5 shows the forecast directional distribution patterns for the project generated trips. The project trip distribution patterns are based on review of existing traffic volume data, surrounding land uses, designated truck routes, and the local and regional roadway facilities in the project vicinity.

Based on the identified project trip generation and distributions, morning and evening peak hour intersection turning movement volumes expected from the project are shown on Figure 6 and Figure 7, respectively (in passenger car equivalent trips). Morning and evening peak hour intersection turning movement volumes of trucks (in passenger car equivalent trips) expected from the project are shown on Figure 8 and Figure 9. The morning and evening peak hour intersection turning movement volumes for the combined passenger car and truck trips expected from the project are shown on Figure 10 and Figure 11, respectively.

8. Traffic Forecasts

a) Existing Plus Project

The traffic volumes for existing plus project traffic conditions have been derived by adding the project generated trips to existing traffic volumes. Existing plus project morning and evening peak hour intersection turning movement volumes are shown on Figure 12 and Figure 13, respectively.

b) Future (2023) Without Project

To assess Future (Year 2023) without project traffic conditions, existing traffic volumes were combined with an ambient growth factor of 0.5% per year over a 5-year period. Future (Year 2023) Without Project morning and evening peak hour intersection turning movement volumes are shown on Figure 14 and Figure 15, respectively.

c) Future (2023) Plus Project

To assess Future (Year 2023) plus project traffic conditions, existing traffic volumes were combined with an ambient growth over a 5-year period. Future (Year 2023) Without Project morning and evening peak hour intersection turning movement volumes are shown on Figure 14 and Figure 15, respectively.

To assess Future (Year 2023) plus project traffic conditions, project generated trips were added to Future (Year 2023) Without Project traffic volumes. Future (Year 2023) with project morning and evening peak hour intersection turning movement volumes are shown on Figure 16 and Figure 17, respectively.

9. Traffic Impacts

1. Project Methodology

The traffic assessment for the traffic development impact on intersections will be analyzed in the context of the City of Carson and CA MUTCD policies and guidelines. The reference material used to evaluate the study area intersections included the following:

- California Manual on Uniform Traffic Control Devices (CA-MUTCD), 2014 Edition, Rev 3.
- The Highway Capacity Manual (HCM), 2010
- City of Carson Traffic Impact Assessment Guidelines

For this study, level of service (LOS) will be used to determine the operating conditions of each intersection. The criteria for LOS in this study are based on the intersection capacity utilization (ICU) methodology for signalized intersections. The ICU methodology compares the volume-to-capacity (v/c) ratios of conflicting turn movement at the intersection, sums these conflicting V/C ratios for each intersection approach, and determines the overall ICU. The resulting ICU is expressed in terms of LOS, where LOS A represents free-flow activity and LOS F represents overcapacity operation. According to the City of Carson's Guidelines, LOS at an intersection or roadway is considered to be unsatisfactory when the ICU exceeds 0.90 (LOS D). The relationship of ICU to LOS is shown in Table 4.

Table 4: Signalized Intersection LOS Criteria

Level of Service (LOS)	Intersection Capacity Utilization (ICU)
A	0.00 - 0.60
B	0.61 - 0.70
C	0.71 - 0.80
D	0.81 - 0.90
E	0.91 - 1.00
F	> 1.00

Source: Transportation Research Circular No. 212, Interim Material on Highway Capacity.

The HCM's (2010) methodology is used to determine the LOS at Unsignalized intersection. The relationship of delay to LOS is demonstrated in Table 5.

Table 5: Unsignalized Intersection LOS Criteria

Level of Service (LOS)	Unsignalized Intersection Delay (Sec/veh)
A	≤ 10
B	> 10 and ≤ 15
C	> 15 and ≤ 25
D	> 25 and ≤ 35
E	> 35 and ≤ 50
F	> 50

Source: Exhibit 19-1, Highway Capacity Manual, 2010

Traffic engineering software Synchro was used to conduct the study network analysis.

2. Level of Service

The existing intersections' LOS for the study area is based on collected traffic counts. The primary measures of evaluation include level of service and delay. The study intersections' LOS was calculated using Synchro software which is based on the Highway Capacity Manual method for signalized and unsignalized intersections. The A.M. and P.M. peak hour LOS were calculated based on following conditions:

- Existing conditions (2018)
- Existing conditions (2018) plus developments
- Future conditions (2023)
- Future conditions (2023) plus developments

Table 6 summarizes the results of the existing weekday morning and evening peak hour V/C ratio and corresponding LOS at each intersection. Table 7 summarizes the results of the future (Year 2023) weekday morning and evening peak hour V/C ratio and corresponding LOS at each intersection. The detailed Synchro calculations report for existing and future conditions are attached as Appendix B.

[1] TWSC: Two-Way Stop Controlled

[2] Unsignalized

[3] Mitigations at intersections under the jurisdiction of Caltrans will require further coordination and detailed design review with the relevant jurisdiction to determine the feasibility of the mitigation.

3. Significant Traffic Impact Criteria

Under the City of Carson guidelines, an intersection would be significantly impacted with an increase in V/C ratio to or greater than 0.02 for intersections operating at LOS E or F after the addition of project traffic. Based on the established criteria shown in Table 8, if a project is found to cause a significant traffic impact on a subject study intersection, then feasible mitigation measures must be provided in order to reduce the expected traffic impacts.

Table 8: Significant Traffic Impact Criteria

Significant Transportation Impact (V/C Methodology)		
Level of Service	Final V/C Ratio	Project-Related Increase In V/C
E or F	> 0.9	equal to or greater than 0.02

All 22 intersections were analyzed on future plus project traffic volumes to determine the projected V/C ratios and LOS. As shown in Tables 6 and 7, 15 of the 22 of intersections are projected to operate at an acceptable level of service (LOS D or better) during both morning and evening peak hours. The detailed analysis tables are provided in Appendix B.

4. Significant Impacted Intersections

The following four (4) intersections are projected at poor level of service (LOS E or F) after full implementation of all new projects in the City of Carson.

- Figueroa Street & Del Amo Boulevard (PM Peak Hour)
- Main Street & Del Amo Boulevard (PM Peak Hour)
- Avalon Boulevard & Del Amo Boulevard (AM & PM Peak Hour)
- Avalon Boulevard & Carson Street (PM Peak Hour)

The following three (3) unsignalized intersections have to be converted to signalized intersections after full implementation of all new projects in the City of Carson.

- Stamps Drive and Del Amo Boulevard (AM & PM Peak Hour)
- Main Street and Lenardo Drive (AM & PM Peak Hour)
- Lenardo Road and I-405 Southbound Ramps (AM & PM Peak Hour)

10. Mitigation Calculation

This section calculates the mitigation fee at seven (7) intersections described in the previous section. All mitigation geometries are based on future condition plus project analysis. The mitigation measures include a set of physical improvements as well as a set of transportation demand management strategies that would likely reduce the LOS associated with the proposed projects.

Intersection 5 – Figueroa Street & Del Amo Boulevard:

The intersection of Figueroa St. and Del Amo Blvd. would be significantly impacted by additional vehicle trips associated with the new development project during the PM peak hour under the future year analysis. Following are the proposed physical mitigation for this intersection:

- Conversion of the westbound thru lane to second left-turn lane
- Conversion of the first westbound right-turn lane to thru/right lane
- Addition of a second southbound left-turn lane
- Traffic signal modification

The improvements would require acquisition of right-of-way on the northwest of the intersection, removing the sidewalk and re-installing the curb and sidewalk, and re-striping the intersection.

Intersection 6 – Main Street & Del Amo Boulevard:

The intersection of Main St. and Del Amo Blvd. would be significantly impacted by additional vehicle trips associated with the new development project during the PM peak hour under the future year analysis. Following are the proposed physical mitigation for this intersection:

- Addition of a second westbound left-turn lane
- Addition of an eastbound right-turn lane
- Conversion of the eastbound thru/right-turn lane to thru lane
- Addition of a second northbound left-turn lane
- Addition of an northbound right-turn lane
- Conversion of the northbound thru/right-turn lane to thru lane
- Conversion of the southbound thru/right-turn lane to thru lane
- Addition of southbound thru/right-turn lane
- Traffic signal modification

The improvements would require purchasing right-of-way on northwest, northeast, and southwest of the intersection. The improvements would also require removing and re-installing of the existing median islands on the east and south approaches of the intersection, removing and re-installing the sidewalks on all 4 approaches of the intersection, and re-striping the intersection.

Intersection 7 – Stamps Drive & Del Amo Boulevard:

The unsignalized intersection of Stamps Dr. and Del Amo Blvd. would be significantly impacted by additional vehicle trips associated with the new development project during the AM and PM peak hours under the Future year analysis. Following are the proposed physical mitigation for this intersection:

- Install traffic signal and required equipment
- Addition of an eastbound dedicated left-turn lane

The improvements would require removing and re-installing of the existing median islands on the west approach of the intersection.

Intersection 8 – South Avalon Boulevard & Del Amo Boulevard:

The intersection of S. Avalon Blvd. and Del Amo Blvd. would be significantly impacted by additional vehicle trips associated with the new development project during the AM and PM peak hours under the future year analysis. Following are the proposed physical mitigation for this intersection:

- Addition of a second northbound left-turn lane
- Addition of a second westbound left-turn lane

- Conversion of the westbound right-turn lane to thru/right lane
- Conversion of the southbound thru/right-turn lane to a right-turn lane
- Traffic signal modification

The improvements would require removing the existing median islands on the south approach of the intersection, re-striping the south approach of the intersection.

Intersection 10 – Main Street & Lenardo Drive:

The unsignalized intersection of Main St. and Lenardo Dr. would be significantly impacted by additional vehicle trips associated with the new development project during the AM and PM peak hours under the Future year analysis. Following are the proposed physical mitigation for this intersection:

- Install traffic signal and required equipment
- Addition of an northbound dedicated right-turn lane

The improvements would require removing the existing median islands on the south approach of the intersection, re-striping the south approach of the intersection.

Intersection 13 – Lenardo Drive and I-405 Southbound Ramps:

The unsignalized intersection of Lenardo Dr. and I-405 SB ramps would be significantly impacted by additional vehicle trips associated with the new development project during the AM and PM peak hours under the Future year analysis. Following are the proposed physical mitigation for this intersection:

- Traffic signal modification

Intersection 20 – South Avalon Boulevard & Carson Street:

The intersection of S. Avalon Blvd. and Carson St. would be significantly impacted by additional vehicle trips associated with the new development project during the PM peak hour under the future year analysis. Following are the proposed physical mitigation for this intersection:

- Conversion of the first southbound thru lane to left-turn lane
- Conversion of the second eastbound left-turn lane to thru lane
- Conversion of the northbound thru/right-turn lane to right-turn lane
- Traffic signal modification

The improvements would require removing the existing median islands on the north approach of the intersection, re-striping the north approach of the intersection.

Table 9 shows the level of service for the affected intersections after the implementation of proposed physical mitigations.

Table 9: Intersection Impact Analysis

ID	Peak Hour Period	Future		Future+Project		V/C Increase	Significant Impact?	After mitigation	
		V/C	LOS	V/C	LOS			V/C	LOS

11. Improvement Cost

The estimated costs of improvements for each impacted intersection are shown in Table 10.

Table 10: Intersection Mitigation Cost

ID	Intersection	Mitigation	Cost
5	Figueroa St. and Del Amo Blvd.	Acquire ROW from the undeveloped parcel on the northwest of intersection to widening the north and west approaches.	\$700,000.00
		Convert the first westbound thru lane to second westbound Left-turn lane.	\$54,000.00
		Convert the westbound right lane to a to a thru/right-turn lane.	\$30,000.00
		Convert the first southbound thru lane to second left-turn lane	\$54,000.00
		Add dedicated southbound right-turn lane	\$72,000.00
		Remove sidewalk on southbound and eastbound approaches of intersection, reinstall sidewalk, re-striping the north, west, and east approaches	\$60,000.00
		Traffic signal modification	\$150,000.00
		Total	\$1,120,000.00
6	S. Main St. and E. Del Amo Blvd.	Acquire ROW on northeast and northwest of intersection to accommodate westbound and southbound right-turn lanes.	\$700,000.00
		Convert the first northbound thru lane to second northbound left-turn lane.	\$54,000.00

City of Carson Interim Development and Soundwall Impact Fee

		Add dedicated northbound right-turn lane.	\$120,000.00
		Convert the northbound thru/right-turn lane to a thru lane.	\$30,000.00
		Add dedicated eastbound right-lane.	\$72,000.00
		Convert the eastbound thru/right-turn lane to thru lane.	\$30,000.00
		Convert the first westbound thru lane to second westbound Left-turn lane.	\$54,000.00
		Convert the southbound thru/right-turn lane to thru lane.	\$30,000.00
		Add southbound thru/right-turn lane.	\$72,000.00
		Remove and re-install medians on east and south approaches of intersection and re-install striping on all 4 approaches, remove and re-install the sidewalks on all 4 approaches	\$150,000.00
		Traffic signal modification	\$150,000.00
		Total	\$1,462,000.00
7	Stamps Dr. and Del Amo Blvd.	Add dedicated eastbound left-turn lane.	\$72,000.00
		Remove and re-install median on eastbound approach of intersection.	\$32,000.00
		Convert from unsignalized to signalized intersection.	\$250,000.00
		Total	\$354,000.00
8	S. Avalon Blvd. and E. Del Amo Blvd.	Acquire ROW on southwest and northwest of intersection to accommodate northbound and southbound additional lanes.	\$700,000.00
		Convert the northbound thru lane to second northbound left-turn lane.	\$40,000.00
		Remove medians on northbound approach of intersection and re-install median and new striping on southbound approach.	\$80,000.00
		Convert the westbound thru lane to second westbound left-turn lane.	\$40,000.00
		Convert the westbound right-turn lane to a to a thru/right-turn lane.	\$40,000.00
		Traffic signal modification	\$150,000.00

City of Carson Interim Development and Soundwall Impact Fee

		Total	\$1,050,000.00	
10	Main St. and Lenardo Dr.	Add dedicated northbound right-turn lane.	\$72,000.00	
		Remove and re-install median on eastbound approach of intersection.	\$32,000.00	
		Convert from unsignalized to signalized intersection.	\$250,000.00	
		Total	\$354,000.00

		Total	\$150,000.00	
20	S. Avalon Blvd. and E. Carson St.	Convert #1 southbound thru lane to second dedicated left-turn lane.	\$40,000.00	
		Remove and re-install the medians on southbound approach of intersection, re-striping on north side of the intersection.	\$32,000.00	
		Convert the northbound thru/right-turn lane to right-turn lane	\$40,000.00	
		Convert the second eastbound left-turn lane to thru lane	\$40,000.00	
		Traffic signal modification	\$150,000.00	
		Total	\$302,000.00	
			Total \$4,792,000.00	
Soil Remediation and Unknown Conditions Costs (10%)			\$ 479,200.00	
Contingency Costs (15%)			\$ 718,800.00	
Administrative / Procurement Costs (10%)			\$ 479,200.00	
			Grand Total \$6,469,200.00	

12. Allocation of Costs

As shown in Table 11, the allocation of intersection improvement costs by development type is based on the share of daily vehicle trips associated with each type of development.

Table 11: Allocation of Costs per Development type

Development Type	Dev Units	Estimated Units	Estimated Average Daily Traffic ¹	Share of New Trips	Share of Cost ²
Residential, Multi-Family	DU	1,470	8,717	12%	\$793,985
Commercial	KSF	810	20,393	29%	\$1,857,488
Office	KSF	68.36	824	1%	\$75,030
Industrial/Business Park	KSF	1,073.28	7,634	11%	\$695,339
Truck Yard	Space	2,187	5,714	8%	\$520,405
Hotel	Room	247	2,018	3%	\$183,803
Recreational	KSF	599	25,130	35%	\$2,288,865
Dormitory	Bed	300	596	1%	\$54,285
Total			71,026	100%	\$6,469,200.00

¹New vehicle trips by development type as a percentage of total new vehicle trips; percentages based on data from Table 3
²Share of improvement cost = total improvement cost from Table 10 x share of new trips

13. Projected Revenue

Potential revenue from the development impact fees calculated in this section can be projected by applying each development cost share from Table 11 to forecasted future units as shown in Table 3. The results are shown in Table 12.

Impact fees calculated in this section are based on the cost of providing intersection improvements that are needed to serve future development, generally.

Assuming that development occurs and improvements are constructed as anticipated in this study, the revenue projected in Table 12 would approximately cover the share of improvement costs assigned to

City of Carson Interim Development and Soundwall Impact Fee

impact fees in Table 10, provided that fees are adjusted periodically to keep pace with changes in construction costs.

Costs and impact fees in this report are shown in current (2019) dollars. Once adopted, impact fees should be adjusted at least annually, to reflect changes in price levels. An appropriate index can be used to adjust facility cost estimates until the cost estimates and fee calculations are updated.

Table 12: Projected Revenue-Intersection Traffic Fees

Development Type	Dev Units ¹	Share of New Trips ²	Share of Cost ³	Added Trips	Trips per Unit	Fee per Unit
Residential, Multi-Family	DU	12%	\$793,985	8,717	5.93	\$540.13
Commercial	KSF	29%	\$1,857,488	20,393	25.18	\$2,293.19
Office	KSF	1%	\$75,030	824	12.05	\$1,097.57
Industrial/Business Park	KSF	11%	\$695,339	7,634	7.11	\$647.87
Truck Yard	Space	8%	\$520,405	5,714	2.61	\$ 237.95
Hotel	Room	3%	\$183,803	2,018	8.17	\$744.14
Recreational	Ksf	35%	\$2,288,865	25,130	41.99	\$3,824.34
Dormitory	Bed	1%	\$54,285	596	1.99	\$180.95
Total		100%	\$6,469,200.00			

¹ Units of development; DU = dwelling unit, KSF = 1,000 gross square feet of building area

² New vehicle trips by development type as a percentage of total new vehicle trips; percentages based on data from Table 3

³ Share of improvement cost = total improvement cost from Table 10 x share of new trips

B- SOUNDWALL FEE ANALYSIS

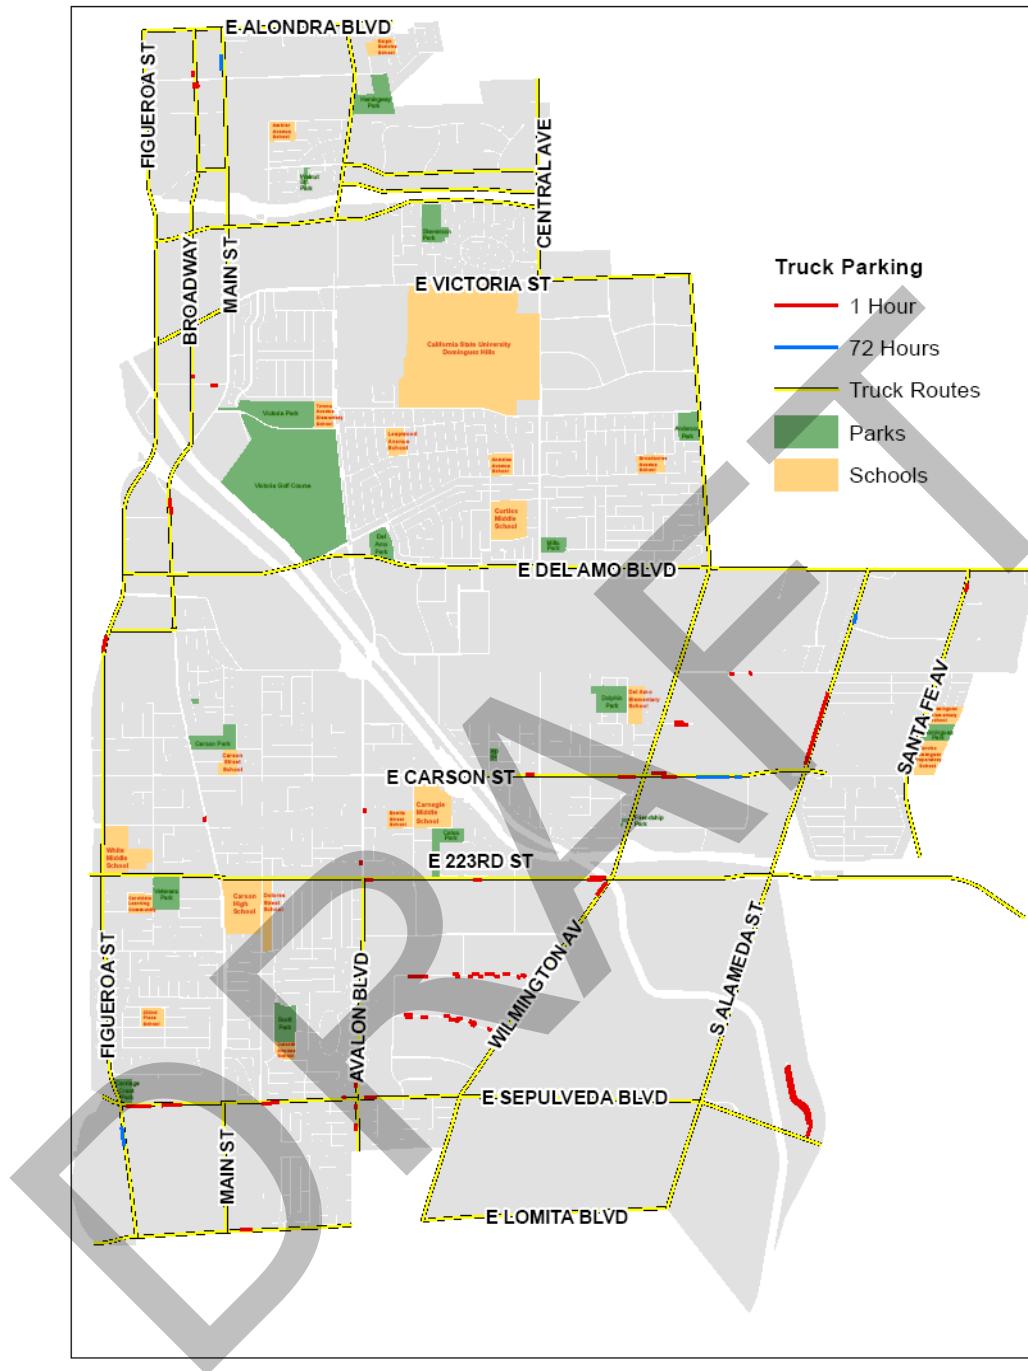

14. Summary

1. Introduction

This Fee Analysis develops an impact fee for the City of Carson to apply towards development projects. The process calculates the percentage of traffic from each development projects produce in the City. Based on the cost of various mitigations needed to better handle the increase in traffic a cost can be applied per trip produced by the different developments across the City. As a result the City can shift part of the cost on to the developers based on the projected amount of trips their project will create. Similarly, this section of the report will analyze the noise level impact certain projects will have on truck routes in the City that border residential neighborhoods. The noise levels are measured in decibels (dBA). Decibels are based on the logarithmic scale, the scale compresses the range of sound pressure to a range of numbers similar to the Richter scale used to measure earthquakes. The type of mitigation to be proposed will be soundwalls placed along truck routes which border the affected neighborhoods. The cost of the soundwalls will be distributed to the various projects contributing to the increase in noise levels along the truck routes.

2. Existing Conditions

This report provides an analysis of the various projects in the City of Carson and the impact they have on traffic. Several projects involve the construction of various warehouses and retail centers which contribute to the increase in truck traffic. The City has several truck routes used for hauling and delivering goods throughout the area; see Figure 18. These truck routes are impacted by the increase in traffic and as a result, raise the noise level. In this fee analysis, the noise level of truck routes bordering residential neighborhoods was studied and used to determine the proposed location of soundwall barriers. Sections of roadways along Sepulveda Boulevard, Wilmington Avenue, Del Amo Boulevard, 223rd Street, and Albertoni Street have been considered using their proximity to future development projects, as shown in Figure 19, and the existing decibel level data collected from The City of Carson's General Plan Chapter 7; See Table 14.

Existing Truck Routes and Parking Areas

MapProject0001Trucking_Easting_V2_1x17.indd

Figure 18: City of Carson Truck Routes

15. Location

As illustrated in Figure 19, 7 sections of truck routes were identified for the removal and replacement, or installation of a soundwall. These streets are listed below:

1. Albertoni Street – Main Street to Central Avenue (3,000 feet)
2. Del Amo Boulevard – Main Street to I-405 (4,000 feet)
3. Wilmington Avenue – University Avenue to Del Amo Boulevard (3,000 feet)
4. Wilmington Avenue – 213th Street to 300 feet N/O Carson Street (1,000 feet)
5. Wilmington Avenue – 300 feet S/O Carson Street to I-405 (1,800 feet)
6. 223rd Street – Figueroa Street to Avalon Boulevard (8,000 feet)
7. Sepulveda Boulevard – Main Street to Wilmington Avenue (8,000 feet)

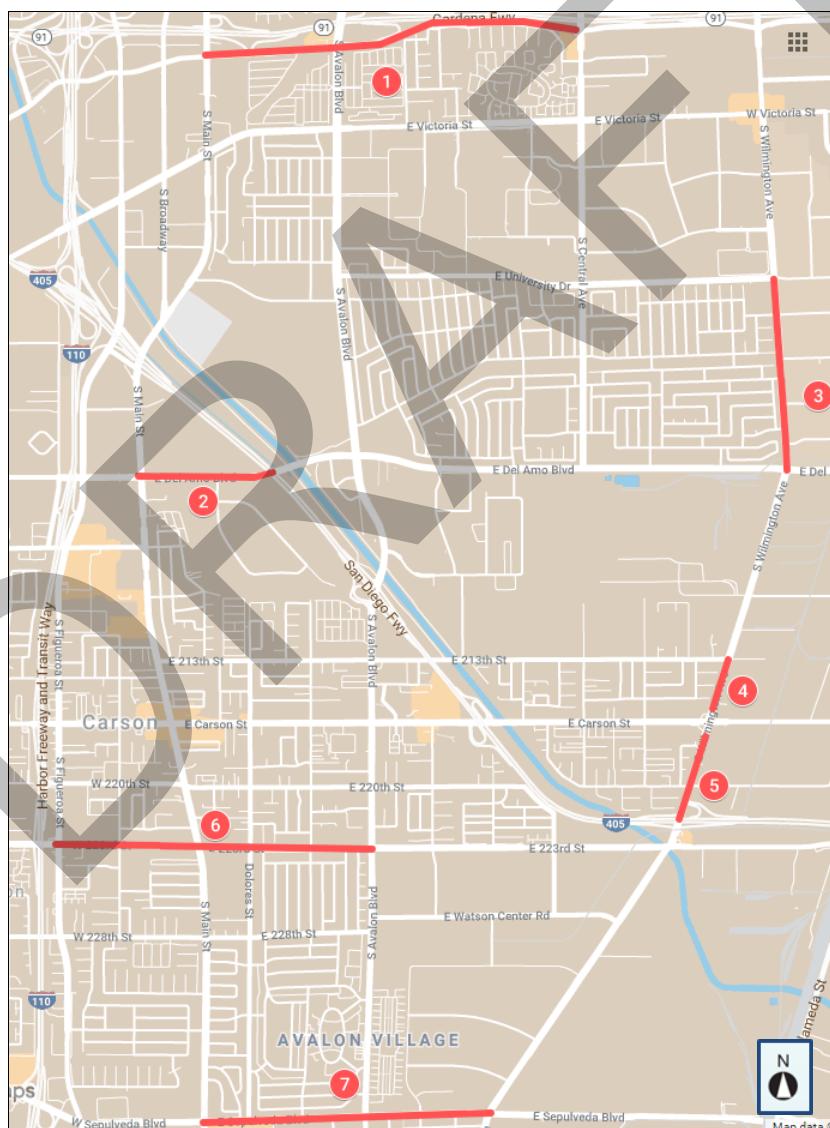

Figure 19: Sound Wall Locations

16. Projects

The Interim Development Impact Fee Analysis studies the impact on traffic and noise from development and determines the cost allocation which is distributed to the various developers. This report analyzes 23 different projects throughout the City. This section concentrates on the proposed placement of soundwalls and has determined the location of the soundwalls and the projects which contribute to the increase in traffic along the truck routes. As shown in Figure 20, a total of 10 projects have been identified which are contributing factors to the increase in noise levels along the truck routes requiring a soundwall. The projects are listed below in Table 13 with trip generation and land use data included:

Table 13: Project Trip Generation Estimate

No.	Project Location	Land Use	Quantity	Unit	Trip Generation (Passenger Car Equivalent)						
					Daily	AM			PM		
						IN	OUT	TOTAL	IN	OUT	TOTAL
1	2315 E. Dominguez Street	Industrial	132	TS	378	48	19	66	20	37	57
2	2149 E. Sepulveda Boulevard	Industrial	800	TS	1,305	165	64	229	69	129	198
6	24700 Main Street	Industrial	253	KSF	2,010	234	32	265	34	246	280
7	20400 Main Street	Commercial	730	KSF	18,808	290	178	468	911	987	1,898
8	20881 S. Main Street	Industrial	158.45	KSF	1,372	193	79	272	82	147	229
9	18701 S. Wilmington Avenue	Industrial	438.67	KSF	3,486	405	55	460	58	427	485
13	LA DWP corridor in South Carson	Industrial	580	TS	2,204	273	410	683	270	358	628

18	20601 S. Main Street	Industrial	53	KSF	1,358	177	71	248	75	137	212

KSF = 1,000 gross square feet of building area, TS = Truck Space

17. Future Conditions

The City of Carson has 23 projects planned for the future which were studied in this report. It was determined that 10 of these projects have a direct impact on the increase of noise levels along the truck routes shown in Figure 20. These projects include the construction of commercial and industrial storage facilities, truck yards, and warehouses which will add a combined total of 31,311 daily trips to the roadway sections selected for the installation of soundwall. This increase in traffic added by the future developments will increase the amount and level of noise throughout the City. The installation of the soundwalls will help mitigate the noise pollution along the truck routes by decreasing the noise level. The height and location of the walls will be based on lowering the noise level as close to 67 decibels (dBA) per the 2013 Caltrans Technical Noise Supplement (TeNS). This report focused on areas of the City which have the highest levels of noise according the City of Carson's General Plan. The projects listed in Table 13 are illustrated below in Figure 20.

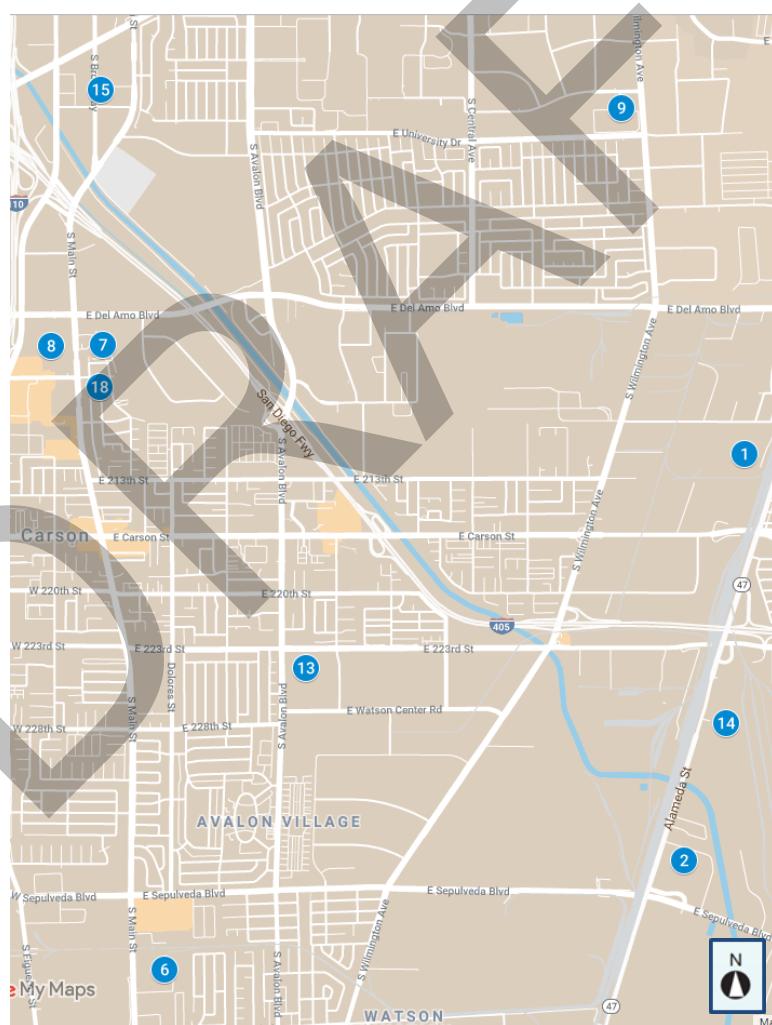

Figure 20: Project Locations

18. Methodology

The process used for determining the development impact on noise levels along selected truck routes in the City of Carson utilizes the guidelines, data, and policies provided by the City of Carson's General Plan, Caltrans Standard Plans, Caltrans Contract Cost Data, the Caltrans Highway Design Manual, Caltrans Technical Noise Supplement (TeNS), and California Manual on Uniform Traffic Control Devices (CA MUTCD). Truck routes (as shown in Figure3) in the City were examined for proximity to the list of projects provided and whether or not roadway segments were adjacent to residential neighborhoods. After identifying the corridors which qualify as being affected by nearby development impacts, noise level data was evaluated to determine which areas exceeded the standard of 67 dBA. Once the areas of concern were identified, the corridors were evaluated for soundwall design considerations to reduce the noise level to below the standard. According to Chapter 7 of the City's General Plan, the existing noise levels at the residential locations decrease due to various sound barriers such as vegetation or trees, embankments, and fencing or property walls in place. These barriers can reduce the measured noise level by as much as 5-10 dBA, this study will use the minimum decrease in noise level of 5 dBA (See Table 14). These areas currently exceed the maximum noise level standard and will be further impacted by the projects listed in Table 13.

Table 14: Selected Truck Routes Noise Levels

Selected Truck Route Sections and Current Noise Levels			
Location (List From Section 3)	Associated Project	Existing Noise Level	Existing Noise Level (minus 5 dBA)
1. Albertoni Street	9 – 18701 S. Wilmington Avenue 15 – 18530 Broadway	74.4 dBA	69.4 dBA
2. Del Amo Boulevard	7 – 20400 Main Street 8 – 20881 S. Main Street 18 – 20601 S. Main Street	75.1 dBA	70.1 dBA
3. Wilmington Avenue	1 – 2315 E. Dominguez Street 9 – 18701 S. Wilmington Avenue	75.5 dBA	70.5 dBA
4. Wilmington Avenue	1 – 2315 E. Dominguez Street 14 – 22632 S. Alameda Street	79.5 dBA	74.5 dBA
5. Wilmington Avenue	1 – 2315 E. Dominguez Street 14 – 22632 S. Alameda Street	79.5 dBA	74.5 dBA

Selected Truck Route Sections and Current Noise Levels			
Location (List From Section 3)	Associated Project	Existing Noise Level	Existing Noise Level (minus 5 dBA)
6. 223 rd Street	13 – LA DWP 14 – 22632 S. Alameda Street	74.4 dBA	69.4 dBA
7. Sepulveda Boulevard	2 – 2149 E Sepulveda Boulevard 6 – 24700 S. Main Street	77.7 dBA	74.7 dBA

19. Cost of Sound Wall

All mitigations include the construction of a soundwall and based upon existing and future conditions. The cost of the soundwall varies in height, length, materials, and installation costs. The cost estimates for the proposed sound walls were obtained from 2018 Caltrans Contract Cost Data and is presented below in Table 15.

Table 15: Cost of Sound Wall Barrier per Linear Foot

Height of wall	Material	Quantity (1)	Unit Cost (2)	Cost per Item (1x2)	Total Cost per Linear Foot
6 Feet	Structural Concrete	.33 Cubic Yards	\$950.00	= \$314	\$494 + 20% Construction Contingency = \$593
	Rebar	20 lb	\$1.50	= \$30	
	Soundwall	6 Feet	\$30.00	= \$150	
10 Feet	Structural Concrete	.55 Cubic Yards	\$950.00	= \$523	\$868 + 20% Construction Contingency = \$1040
	Rebar	30 lb	\$1.50	= \$45	
	Soundwall	10 Feet	\$30.00	= \$300	

The height of each soundwall was based on the potential reduction in noise level per the Caltrans Technical Noise Supplement. The installation of a 6 foot soundwall will reduce the noise level by 5 dBA and the installation of a 10 foot soundwall will reduce the noise level by 7 dBA. Each wall was selected according to the number of decibels needed to reduce each roadway section to below or close to the standard noise level of 67 dBA.

- Albertoni Street – Portions from Main Street to Central Avenue (3,000 feet). This segment borders a residential neighborhood on the south side of the truck route for a length of 3,000 feet.

The corridor has an existing noise level of 69.4 dBA, the installation of a 6 foot soundwall will decrease the noise level to 64.4 dBA.

2. Del Amo Boulevard – Main Street to I-405 (4,000 feet). This segment borders a residential neighborhood on the north and south side of the truck route for a length of 4,000 feet. The selected corridor has an existing decibel noise level of 70.1 dBA, the installation of a 6 foot soundwall will decrease the noise level to 66.1 dBA.
3. Wilmington Avenue – University Avenue to Del Amo Boulevard (3,000 feet). This length of Wilmington Avenue borders a residential neighborhood on the west side of the truck route for a length of 3,000 feet. This segment has an existing noise level of 70.5 dBA, the installation of a 6 foot soundwall will decrease the noise level to 65.5dBA.
4. Wilmington Avenue – 213th Street to 300 feet N/O Carson Street (1,000 feet). This segment borders a residential neighborhood on the west side of the truck route for a length of 1,000 feet. The selected street has an existing decibel noise level of 74.5 dBA, the installation of a 10 foot soundwall will decrease the noise level to 67.5 dBA.
5. Wilmington Avenue – 300 feet S/O Carson Street to I-405 (1,800 feet). This segment borders a residential neighborhood on the west side of the truck route for a length of 1,800 feet. The selected roadway has an existing decibel noise level of 74.5 dBA, the installation of a 10 foot soundwall will decrease the noise level to 67.5 dBA.
6. 223rd Street – Portions from Figueroa Street to Avalon Boulevard (8,000 feet). This segment borders a residential neighborhood on the north and south side of the truck route for a length of 8,000 feet. The selected route has an existing noise level of 69.4 dBA, the installation of a 6 foot soundwall will decrease the noise level to 64.4 dBA.
7. Sepulveda Boulevard – Main Street to Wilmington Avenue (8,000 feet). This portion of Sepulveda Boulevard borders a residential neighborhood on the north and south side of the truck route for a length or 8,000 feet. The study corridor has an existing noise level of 74.7 dBA, the installation of a 10 foot soundwall will decrease the noise level to 67.7 dBA.

20. Improvement Cost:

The cost estimate of improvements for each impacted truck route is shown in Table 16.

Table 16: *Truck Route Mitigation Cost*

Total Cost of Improvements for Impacted Truck Routes				
Impacted Truck Routes	Proposed Height of Sound Wall	Length of Sound Wall	Unit Cost of Sound Wall per Linear Foot	Total Cost
1. Albertoni St.	6 Feet	3,000 Feet	\$593	\$1,779,000
2. Del Amo Blvd.	6 Feet	4,000 Feet	\$593	\$2,372,000
3. Wilmington Ave.	6 Feet	4,000 Feet	\$593	\$2,372,000
4. Wilmington Ave.	10 Feet	1,000 Feet	\$1,040	\$1,040,000
5. Wilmington Ave.	10 Feet	1,800 Feet	\$1,040	\$1,872,000
6. 223 rd St.	6 Feet	8,000 Feet	\$593	\$4,744,000
7. Sepulveda Blvd.	10 Feet	8,000 Feet	\$1,040	\$8,320,000
				Total = \$22,499,000

The total cost of \$22,499,000 shown in Table 16 is distributed to each associated project by dividing the total cost by the number of daily trips produced by each project per square feet of building space or per truck space. Based on each projects percentage of the trips contributed will determine the cost allocation to each individual development as shown in Table 17.

Table 17: Allocation of Costs per Development

Allocation of Costs						
Impacted Truck Routes	Associated Projects	Total Trips/ KSF or TS ^[1]	% Share of Improvements	Total Cost of Improvements	Cost Per SF or TS	Cost Allocation
1. Albertoni St.	9 – 18701 S. Wilmington Ave.	3,486/438.66 KSF	95%	\$1,779,000	\$3.85	\$1,690,050
	15 – 18530 Broadway	169/ 20.16 KSF	5%		\$4.41	\$88,950
2. Del Amo Blvd.	7 – 20400 Main St.	18,808/730 KSF	87%	\$2,372,000	\$2.83	\$2,063,640
	8 – 20881 S. Main St.	1,372/158.45 KSF	7%		\$1.05	\$166,040
	18 – 20601 S. Main St	1,358/53 KSF	6%		\$2.69	\$142,320
3. Wilmington Ave.	1 – 2315 E. Dominguez St.	378/ 132 TS	10%	\$2,372,000	\$1,797	\$237,200
	9 – 18701 S. Wilmington Ave.	3,486/ 438.66 KSF	90%		\$4.87	\$2,134,800
4. Wilmington Ave.	1 – 2315 E. Dominguez St.	378/ 132 TS	63%	\$1,040,000	\$4,964	\$655,200
	14 – 22632 S. Alameda St.	221/ 18.36 KSF	37%		\$20.96	\$384,800
5. Wilmington Ave.	1 – 2315 E. Dominguez St.	378/ 132 TS	63%	\$1,872,000	\$8,935	\$1,179,360
	14 – 22632 S. Alameda St.	221/ 18.36 KSF	37%		\$37.73	\$692,640
6. 223 rd St.	13 – LA DWP	2,204/ 580 TS	91%	\$4,744,000	\$7,443	\$4,317,040
6. 223 rd St.	14 – 22632 S. Alameda St.	221/ 18.36 KSF	9%	\$4,744,000	\$23.25	\$426,960

Allocation of Costs							
Impacted Truck Routes	Associated Projects	Total Trips/ KSF or TS ^[1]	% Share of Improvements	Total Cost of Improvements	Cost Per SF or TS	Cost Allocation	
7. Sepulveda Blvd.	2 – 2149 E. Sepulveda Blvd.	1,305/ 800 TS	39%	\$8,320,000	\$4056	\$3,244,800	
	6 – 24700 Main St.	2,010/253 KSF	61%		\$20	\$5,075,200	
						Total = \$22,499,000	
¹ KSF = 1,000 gross square feet of building area, TS = Truck Space							

21. Projected Revenue

Revenue from the development impact fees concerning the installation of sound wall barriers to mitigate noise levels can be found in Total Cost Allocation in Table 17. Assuming that development occurs and the sound wall barriers are constructed the revenue projected in Table 17 would approximately cover the share of improvement costs. Costs and impact fees in this report are shown in current (2019) dollars. Once adopted, impact fees should be adjusted at least annually, to reflect changes in price levels.

Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 126.4

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.11

Intersection Signal Delay: 61.1

Intersection LOS: E

Intersection Capacity Utilization 87.0%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 20: S Avalon Blvd & E Carson St
