VIA EMAIL

Mayor Albert Robles
Mr. John Raymond- Executive Director
City of Carson
710 E. Carson Street
Carson, CA 90745

Dear Mayor Robles,

DirtMaster Inc. and Robert Schafer has been a Carson contractor for 30 years, employing many Carson residents in the import-export of clean DTSC certified materials.

The clean soil has and is being used in the remediation of the Cal Compact Site on A2 the Macerich/Simon Mall Site. As the grading continues on A2 the depression will be filled and it will require approximately 50K yards. This is more than what I had stock piled without addressing the needs of Grapevine.

At the beginning of the year, the CRA unanimously voted that Dirtmaster Inc. which has vast experience in importing material and hiring Carson employees should be granted priority in filling this task. There is an abundance of suitable soil presently of silty clay which is very acceptable for the gas recovery system and would be wise to stock pile.

DirtMaster Inc. currently has a concrete crushing site on Main Street in Carson and is prepared to supply crushed concrete with no asphalt, wood or brick debris as required by DTSC specs (10-minus content of fines).

It is imperative that we follow DTSC protocol to supply The Gas Recovery System as well as the vaults with headers leading to the burn off station at the operation center.

Please note all the afore mentioned materials are not always available and price dictates supply and demand.

Should you have any additional questions, please contact me at 310-991-2998.

Sincerely,

Robert Schafer
